13 app-referenced root collections + 3 subcollections + 2 Rules-only contracts. No live cloud inventory.
Solid lines = storage hierarchy. String ID links do not create subcollections. Full logical relationships: R01-R46 in the companion dictionary.

BROOMSHARING / ACCOUNT DATA

Cloud Firestore: broomsharing | Collections, document schemas and subcollections

DATABASE
broomsharing

COLLECTION

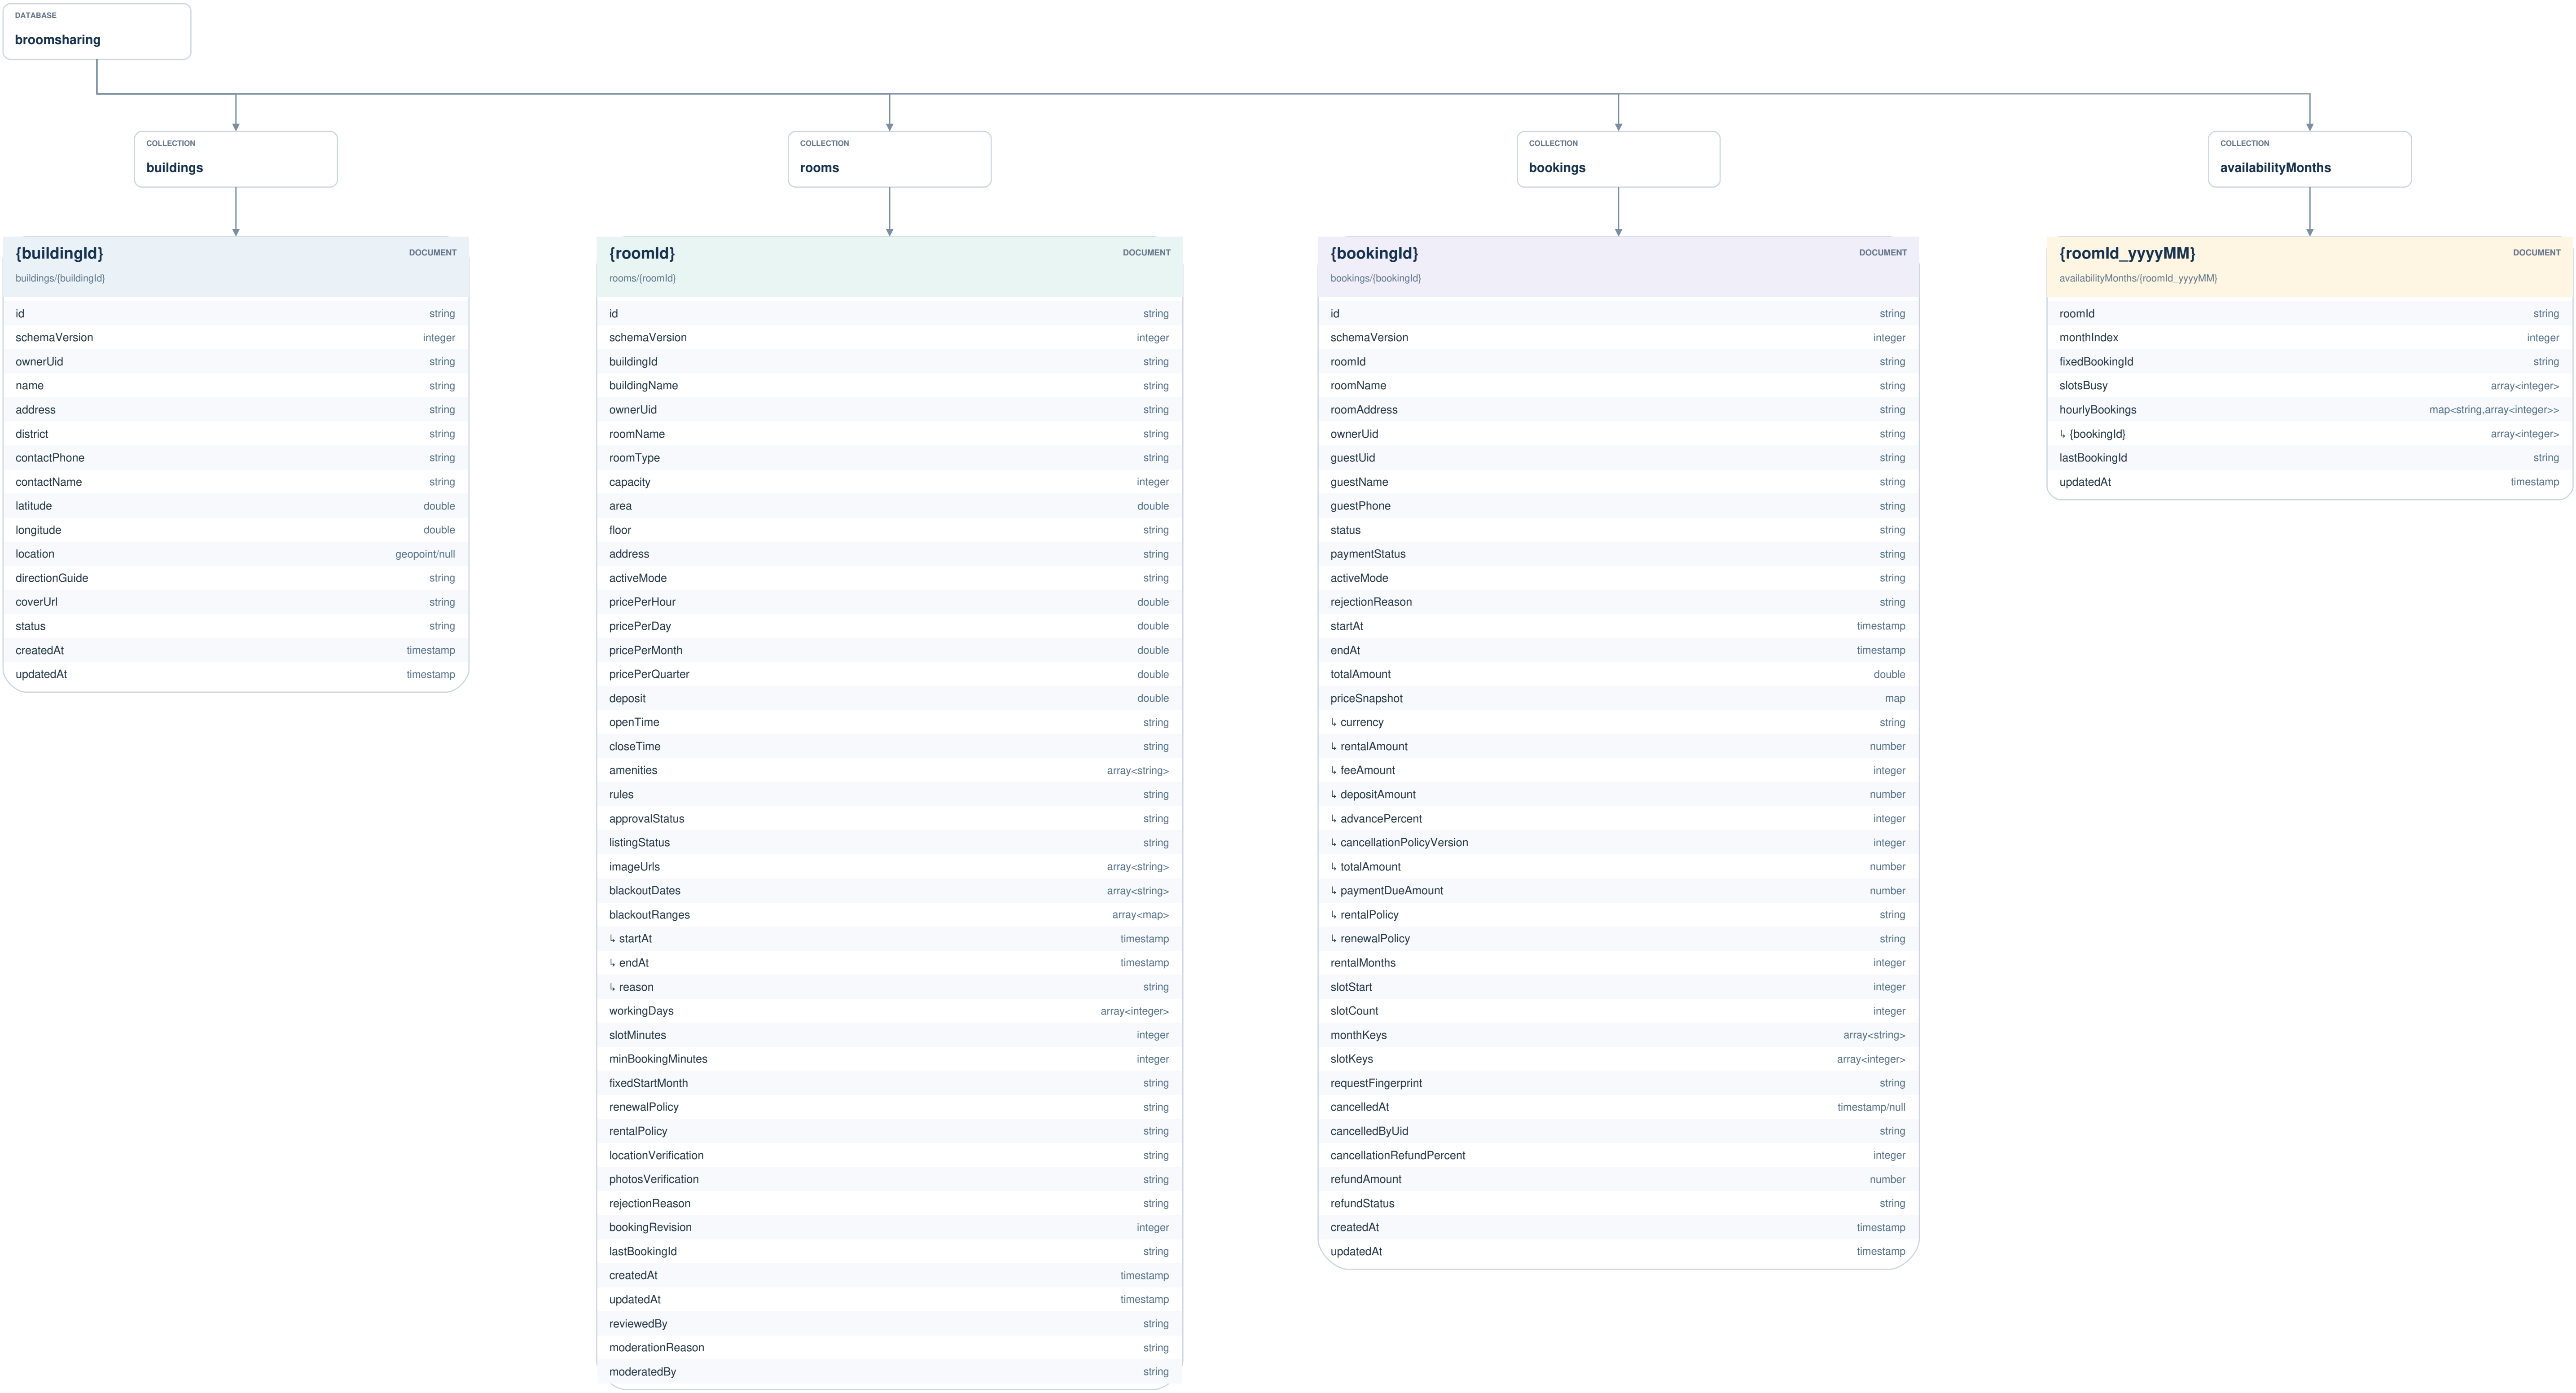
reviewedBy	string

Solid lines = storage hierarchy; [S] = Rules-only field, [D] = dataset-only observation. Fields may be absent before a workflow writes them.
name fields in favorites/chat and copied booking/building information are snapshots, not foreign keys. Full source notes and ID cardinalities: companion dictionary.

BROOMSHARING / BOOKING STORAGE

Four sibling root collections | Full document schemas | Indented rows are embedded map / array members, not subcollections



DATABASE

broomsharing

COLLECTION

{roomId_yyyyMM} DOCUMENT

availabilityMonths/{roomId_yyyyMM}

roomId	string
monthIndex	integer
fixedBookingId	string
slotsBusy	array<integer>
hourlyBookings	map<string,array<integer>>
↳ {bookingId}	array<integer>
lastBookingId	string
updatedAt	timestamp

ID links: rooms.buildingId -> buildings; bookings.roomId -> rooms; monthKeys / calendar booking IDs link bookings and availabilityMonths. Full cardinalities: companion dictionary.
PENDING holds [startAt,endAt). New paymentStatus = UNAVAILABLE; expected advance 40%, no real payment/refund. pricePerDay/deposit are legacy; priceSnapshot and copied names/addresses are snapshots.

BROOMSHARING / CHAT STORAGE

Database > conversations > {guestUid:hostUid} > messages > {messageId} | Full document fields

DATABASE

broomsharing

updatedAt	timestamp

SUBCOLLECTION

messages

{messageId}

DOCUMENT

conversations/{guestUid:hostUid}/messages/{messageId}

id	string
senderUid	string
text	string
roomId	string
roomName	string
sequence	integer
createdAt	timestamp

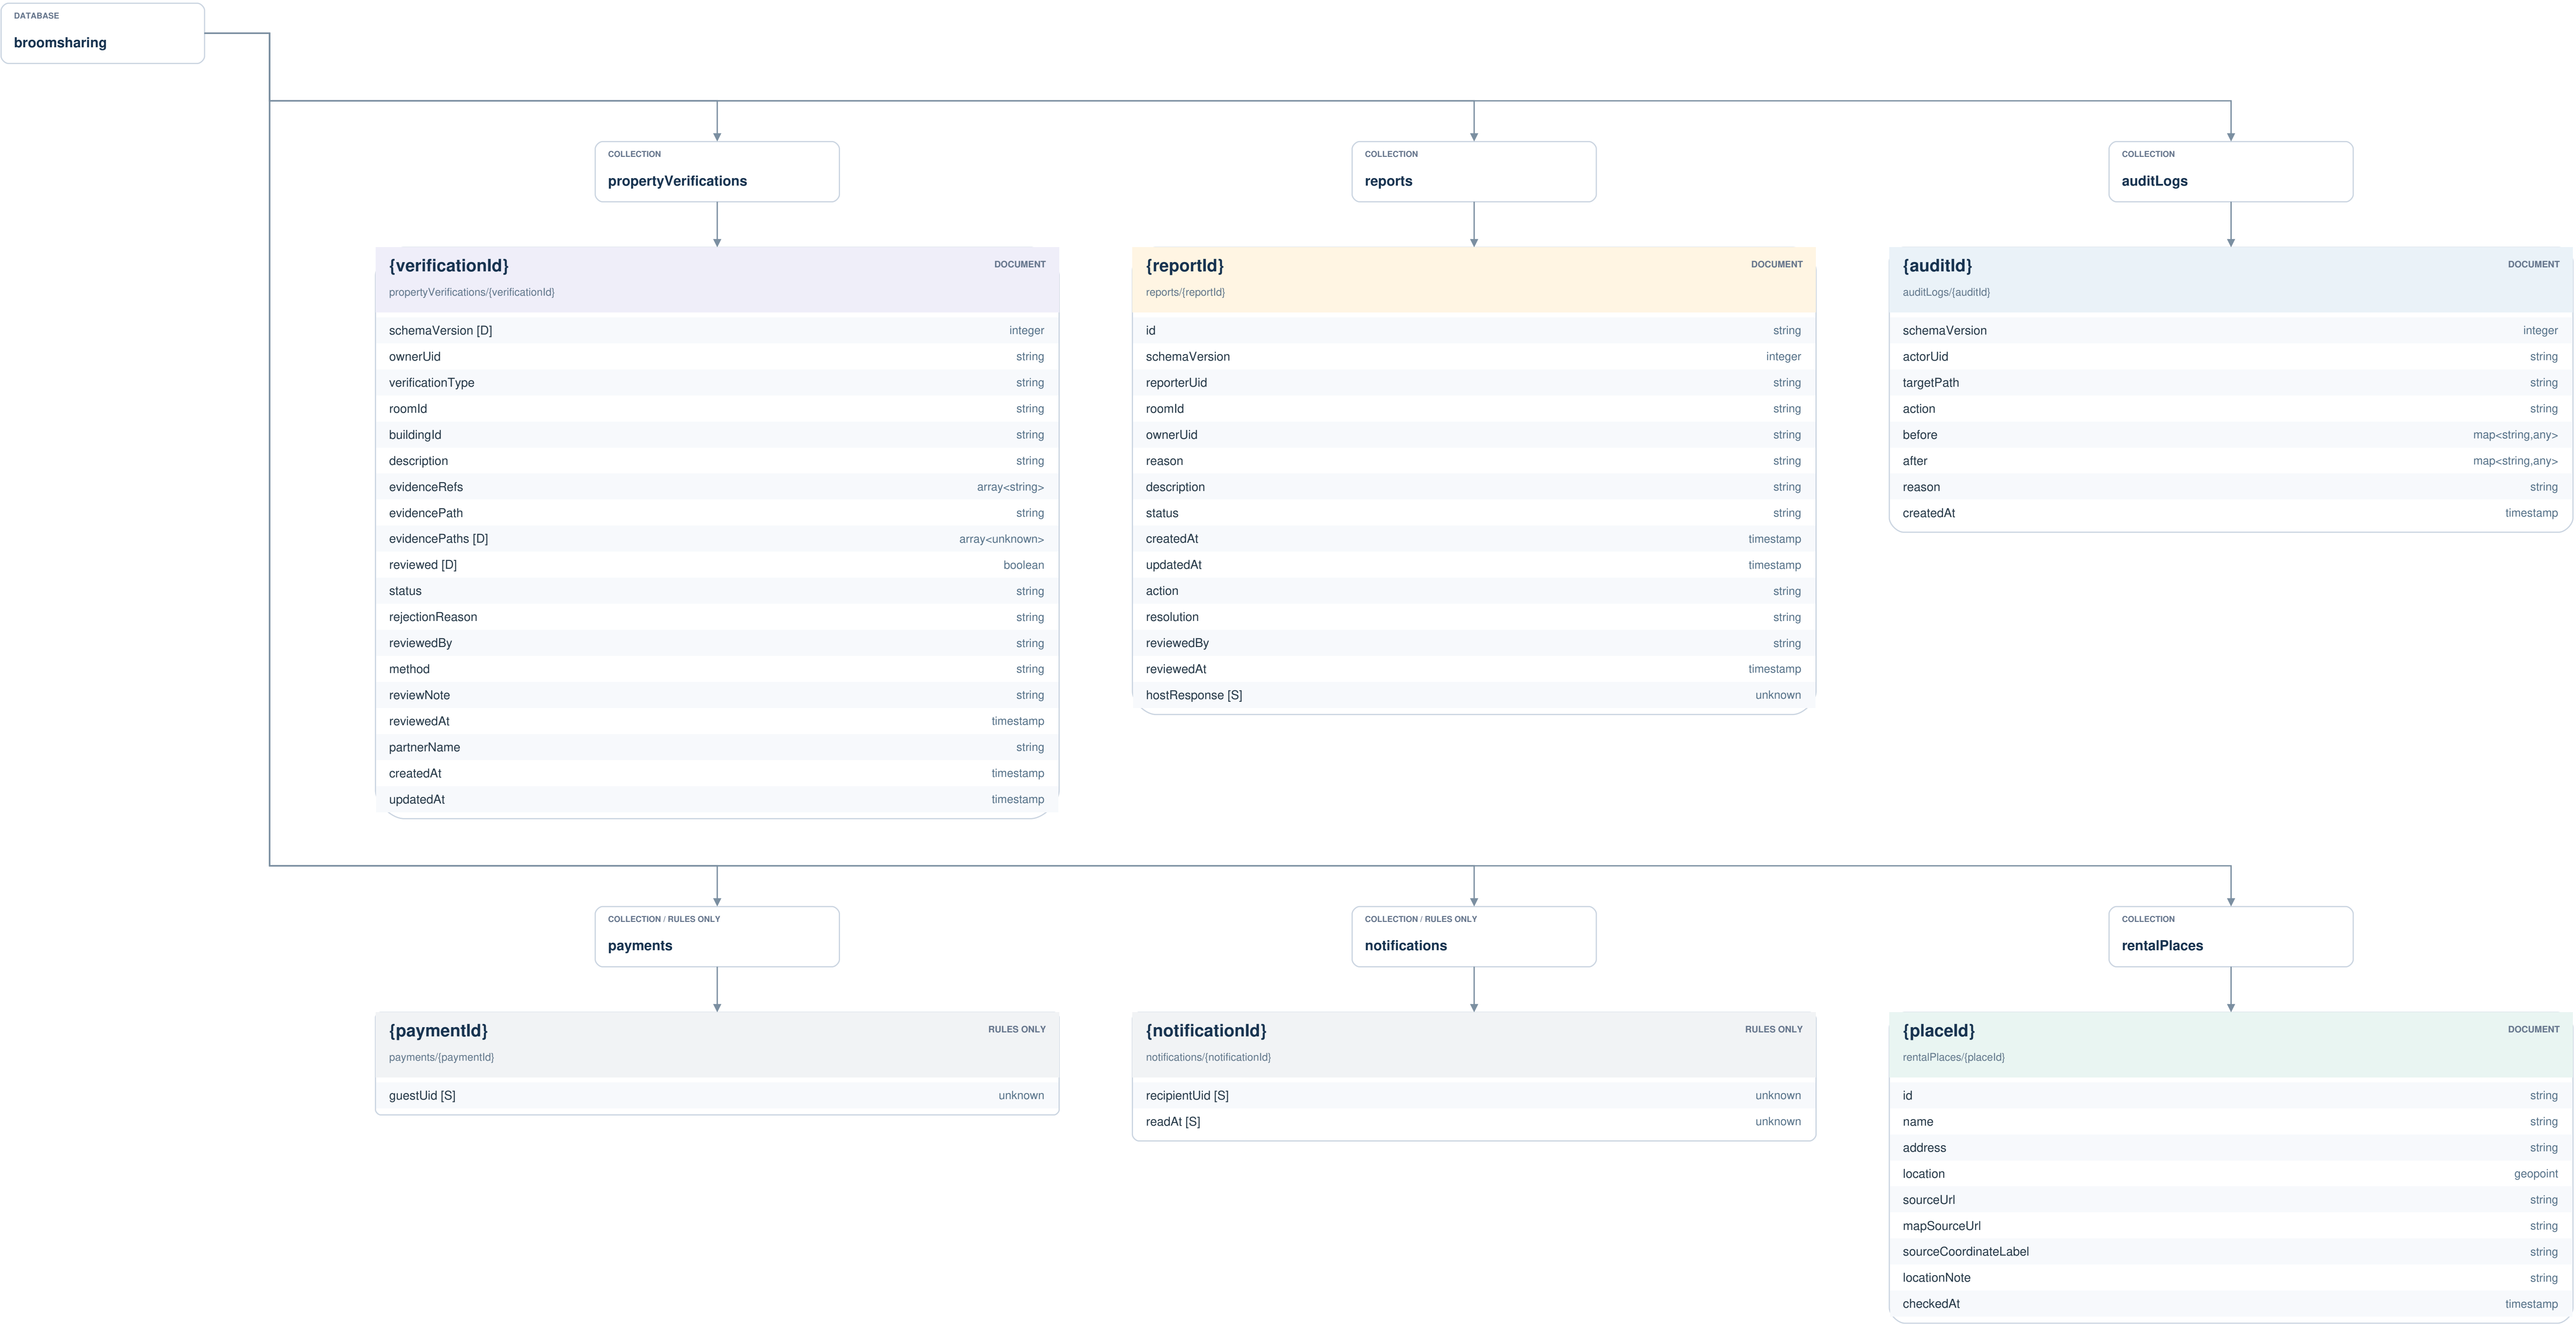
RECEIPTS & CONTEXT

Unread = max(0, received - read) for each recipient.
A send transaction writes the message and counters together.
guestUid / hostUid / senderUid are string links to users.
roomId / bookingId are context links, not subcollections.
guestName / hostName / roomName are snapshots.

messages is inside one conversation document, never directly inside the conversations collection. Full logical references: R25-R34 in the companion dictionary.
One ordered renter-Host pair has one conversation. Admin does not automatically have permission to read private messages.

BROOMSHARING / ADMIN & REFERENCE STORAGE

Sibling root collections and their documents | Private verification, moderation, audit and map reference



DATABASE

broomsharing

COLLECTION

propertyVerifications

locationNote	string
checkedAt	timestamp

[S] Rules-only field; [D] dataset-only observation, not a current write requirement. evidenceRefs/evidencePath are read by Admin; evidencePaths is only a dataset variant.
payments / notifications: Rules-only, incomplete schemas. RentalPlace is not bookable. Admin Storage evidence access is incomplete. auditLogs.targetPath is dynamic; see the full relationship dictionary.
